I/O Device Interfaces

Port - connection point for device (e.g. serial port)

Bus - daisy chain or shared direct access e.g. Peripheral Component Interconnect Bus (PCI) e.g Universal Serial Bus (USB)

Controller (host adapter) - electronics that operate port, bus, device (e.g Northbridge, Southbridge, graphics controller, DMA, NIC, ...)

- Can be integrated or separated (host adapter)
- · Contains processor, microcode, private memory, bus controller, etc

I/O architecture
