

New trends in OS

same same but different

Different architectures but, in the end, the same concepts defined in the 70s

But there are some new trends

- Multicore
- Energy efficiency (mobile and IoT devices)
- Virtualization (cloud computing)

This is a tough course ...

- Lots of things to read, materials to digest before being able to produce something that looks like the solution
- Half-way through implementing your solution, you will need to refactor it
- In the end, it will likely be one of the most challenging and significant piece of code that you have ever written

... but you will gain valuable learning and experience
