

System Calls

➔ Provide user programs with an API to use the services of operating system

There are 5 categories of system calls

- Process control
- File management
- Device management
- Information/maintenance (system configuration)
- Communication (IPC)
- Protection

✓ There are about 500 system calls on Linux 7.0

In reality, many (many) level of abstraction and modularity

➔ This is what makes developing OS very challenging (CSCB07)
